INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.

WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

FOR YOUR SAFETY
Installation and service must be performed by a qualified installer, service agency or the gas supplier.

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch.
- Do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier call the fire department.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

This appliance may be installed in an aftermarket permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

This appliance is suitable for installation in a bedroom or bed sitting room.

---

**WARNING:** This product can expose you to chemicals including ceramic fibers, which are known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

This warning is applicable to all Pacific Energy Fireplace Products.

---

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with the appliance and shall be installed for the protection of children and other at-risk individuals.
**FOR YOUR SAFETY** - Do not install or operate your Town & Country fireplace without first reading and understanding this manual. Any installation or operational deviation from the following instructions voids the Town & Country Fireplaces Warranty and may prove hazardous.

This appliance and its individual shut off valve must be disconnected from gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

This appliance must be isolated from the gas supply piping system by closing its individual manual shut off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

Note: When lit for the first time, the appliance will emit a slight odour for a couple of hours. This is due to the curing of paints, sealants and lubricants used in the manufacturing process. This condition is temporary. Open doors and windows to ventilate area. Smoke and fumes caused by the curing process may cause discomfort to some individuals.

Do not use the fireplace if any part has been under water. Immediately call a qualified service technician to inspect the fireplace and to replace any part of the control system and any gas control which has been under water.

**Safety**

Due to high temperatures, this gas appliance should be located out of traffic and away from furniture and draperies.

Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burns or clothing ignition.

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children, and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at-risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children, and other at-risk individuals out of the room and away from hot surfaces.

Clothing or other flammable material should not be placed on or near the appliance.

Any grill, panel or door removed for servicing the unit must be replaced prior to operating. Failure to do so may create a hazardous condition.

Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.

It is our policy that no responsibility is assumed by the Company or by any of its employees or representatives for any damages caused by an inoperable, inadequate, or unsafe condition which is the result, either directly or indirectly, of any improper operation or installation procedures.

This appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

---

**R - Value Statement**

It has been determined that the Town and Country model TCWS.54STOK indoor/outdoor Fireplace has an R value of 5.8. This determination has been arrived at by the calculation of the typical R value of two layers of 5mm Ceramic glass, combined with 17 inches of ventilated air gap. The one layer of 5mm tempered glass has been ignored in the calculation due to it being open to the exterior air environment on both sides. Real world results may vary due to environmental factors.
Important Note for the Commonwealth of Massachusetts

From Massachusetts Rules and Regulations 248 CMR 5.08:

(a) For all side wall horizontally vented gas fuelled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied.

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fuelled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed, in addition, the installing plumber or gas fitter shall observe that a battery operated or hard-wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fuelled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard-wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fuelled equipment is installed in a crawl space or an attic, the hard-wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision cannot be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed as IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fuelled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS.”

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fuelled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.089(2) (a) 1 through 4.

(b) EXEMPTIONS. The following equipment is exempt from 248 CMR 5.089(2) (a) 1 through 4.

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and
2. Product Approved side wall horizontal vented gas fuelled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS – GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and
2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS – GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fuelled equipment does not provide the parts for venting the fuel gases, but identifies “special venting systems,” the following requirements shall be satisfied by the manufacturer.

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and
2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fuelled equipment, all venting instructions, all parts lists for ventilating instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

Figure 2: TCWS54STOK Mantel clearances.

Table 1: TCWS54STOK Mantel clearances.
Installation Requirements

The Town & Country Fireplace installation and venting must conform to the current CAN/CGA-B149 installation code (in Canada) or the current National Fuel Gas Code, ANSI Z223.1 (in the USA), and approved per local codes. Only qualified (licensed or trained) personnel should install this product.

In the state of Massachusetts, only a licensed Plumber and Gas Fitter may install this product.

Manufactured (Mobile) Home

In some jurisdictions, the Town & Country Fireplace may be installed in Manufactured Homes after the “first sale”. Consult local codes for approval. The fireplace must be fastened in place.

Install in accordance with the current standard Mobile Homes, CAN/CSA Z240 MH (in CANADA), and the Manufacturer’s Home Construction and Safety Standard, Title 24 CFR, Part 3280 or the current Standard for Fire Safety Criteria for Manufactured Home Installations, Sites and Communities ANSI/NFPA 501A (in the USA).

Door Frame Removal

Warning: Turn off the fireplace, and allow ample time for the unit to cool before proceeding.

Caution: The ceramic glass is very fragile, and should be handled with care.

The door frame is held in place by two spring-loaded latches that are operated by a one-piece latch handle.

1. Remove safety barrier screen (Figure 4) by prying the top portion of the screen toward you, then lift the screen from its tabs (inset) located at the base of the door frame.

2. Remove the TC Finishing Touch Trim Kit from the door frame. (If installed)

3. Using a screwdriver (Figure 5) or other similar object, push against the notch in the top of the latch and grab the bottom of the latch handle as it protrudes (Figure 6). Lift handle until latch hook disengages. Repeat for other side while holding glass so it does not tip out.

4. Tilt the top of the door frame out to clear the top edge of the unit. Grasp the sides of the frame and lift up and out to disengage from its bottom track.

5. Place the door frame in a safe place to avoid damage.

6. Re-assemble in reverse order. Latch handle should snap into place and be flush with door frame when engaged correctly.

7. Reinstall Trim Kit if required.

8. Reinstall safety barrier screen.

TIP:

To ensure glass is properly latched, grasp the top left and right sides of the glass frame, under moderate pressure it should pull forward and return to original position evenly on both sides.
Standoffs

The framing kit, once assembled and attached, are used as the top and side standoffs.

Locating The Fireplace

In planning the installation for the fireplace, it is necessary to determine where the unit is to be installed, location of vent system and where gas supply piping may be plumbed. Various types of installations are possible, such as, a peninsula wall, an island, and between two interior walls (Figure 9). Due to high temperatures, do not locate this fireplace in areas of high traffic or near furniture or draperies.

The minimum clearances from the fireplace to combustible surfaces must be adhered to and are shown in Figure 2 and Figure 3.
**Framing and Finishing**

*Note: The fireplace should be in place and venting installed before framing in or building an enclosure around the unit.*

When the appliance is installed directly on carpeting, tile or other combustible material, other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the appliance.

The Town & Country fireplace must be framed in as described below or totally enclosed with non-combustible material, such as facing brick.

Determine the total thickness of facing material to be used. A thickness of 3/4" will allow the finishing surface to be flush with the front of the unit. If preferred, additional masonry type non-combustible material can be installed above and to the sides up to 4 1/2 inches forward of the appliance.

*The finishing material must not interfere with glass frame access.*

A Steel Stud Framing Kit is supplied with the fireplace and must be used unless the fireplace is totally enclosed with non-combustible material. The framing kit comes fully assembled and the outdoor section of the fireplace come fully insulated.

The sides and top of the fireplace are framed in up to the steel studs using conventional lumber. Consult local building codes for specific requirements.

Due to high temperatures, non-combustible backer board, such as cement board or its equivalent, must be used to sheet in the front of the fireplace, extending to the top of the metal frame and laterally to the framing edge bars (Figure 15). Standard sheet rock (dry wall) may be used beyond this.

If the backer board is not to be finished with other non-combustible material such as tiles, it is recommended that top sections of the board be a single sheet of calcium silicate board or its equivalent. Taped and mudded joints may crack due to the elevated temperatures.

**Chase Insulation:**

When installing this fireplace against a non-insulated exterior wall or chase, it is recommended that the outer walls be insulated to same degree as other exterior walls. Do not place fireplace directly against the insulation. Cover the insulation and plastic vapour barrier with a solid surface, such as dry wall (sheet rock). Consult local codes. Do not insulate or use plastic vapour barrier within the framing kit.

**CAUTION:** See “Figure 17” on page 14 before proceeding.

---

**NOTE:**

The chase must be properly sealed at the ceiling level or between floors in a multilevel installation.
Any type of siding may be used (minimum 120 F rating). See Figure 12

Note: Local building codes and regulations may vary. Consult local building codes prior to installation.
A strip of double sided tape is pre-applied to the inside portion of the exterior wall. This allows the installer to extend the application of vapour barrier so that the entire exterior wall is protected from moisture.
Building materials - Outer trim profile view

Siding material - Must not interfere with outer door trim removal.

Dashed line indicates space between removable window frame and siding or facing material needed to allow for removal of outer door trim.

Outer door trim...

1 1/2 inch air space required from the bottom of the door trim for ventilation.

(Facing material or siding above and/or below the 1 1/2 inch air space, may extend outwards from the fireplace as far as desired as long as the 1 1/2 inch air space is maintained).

Location of double side tape for vapour barrier.

Fireplace outer wall assembly.

Siding or facing material may make contact with the door frame on the top and sides of the door frame but not with the bottom of the door frame. There must be a minimum 1 1/2 inch space between the bottom of the door frame and the siding to allow for ventilation.

Siding or facing material must not make contact with the removable outer window trim. There must be enough space between the siding or facing material and the removable outer window trim to allow for removal of door trim.

Figure 12: Outdoor-side building materials.
Double sided tape is factory installed over stainless steel flanges.

Peel backing from double sided tape prior to applying house wrap barrier film.

Double sided tape pre-applied to outdoor box to keep vapour barrier film firmly in place.

Figure 13: Double sided tape for outdoor box.

Figure 14: Outside door dimensions.
Non-combustible board detail

Figure 15: Non combustible board within frame.

Non-combustible recessed installation detail

This fireplace may be recessed up to a maximum depth of 4 1/2". This recess must be constructed from non-combustible material.

It is important to note that any finishing material used must not interfere with the glass door being able to open in the event of ignition of excess gas buildup.

Figure 16: TCWS54STOK Recessed installation details.

Calcium silicate board

If finishing the wall above the unit with paint, the framing kit shipped with the unit should be discarded. Use full sheets of calcium silicate board or equivalent and full length metal studs to finish and frame around the unit.

Calcium silicate board is a high grade material with cement, quartz and natural minerals as the main raw materials. (Note: Calcium Silicate is 1/2" thick)

CAUTION: Calcium Silicate board can be damaged if dropped or struck. Handle with care. Inspect board prior to installation and do not use if cracked.

NOTE: It is recommended to pre-drill mounting holes in the board prior to securing to the framing. This will prevent the board from cracking.

Figure 17: Non-combustible board location.

Figure 18: Frame kit dimensions.

NOTE: FIREPLACE SHOULD BE IN ITS FINAL LOCATION BEFORE FRAMING.
Secure steel frame to combustible framing

- Bend out the tabs 90 degrees before inserting the unit into its framed housing (Figure 19).
- Secure the frame assembly to the wood frame through the tabs (Figure 20).

Install Non-Combustible Board (not supplied)

- Use drywall screws 8 to install the non-combustible board.

This fireplace may be recessed up to a maximum depth of 4 1/2”, this recess must be constructed from non combustible material. The space between the outside lintels and the firebox must be completely free of any obstructions or debris and the door with trim fitted must be able to move freely. No building material is permitted to protrude past the lintel bars attached to the fireplace under ANY circumstance.
Lintel Adjustment

1. The adjustable lintel assembly has two orientations for desired finishing. The flanged edge and the hemmed edge (Figure 22). The lintel comes factory installed with the flange edge out. If the desired edge is different from the factory setting, use the following steps to change it.

2. Remove safety barrier screen.

3. Remove the door trim from the door frame.

4. Loosen the securing bolts in the upper and lower corners on each side of the lintel (Figure 23) and remove the lintel. Rotate the assembly to have the desired edge away from the fireplace.

5. The lintel assembly can then be adjusted to align flush with your facing material by sliding in or out approximately 1”.

6. Tighten the securing bolts.

7. Re-attach the door trim.

8. Reinstall safety barrier screen.
**Power Venting Options**

**POWER VENTING CONFIGURATIONS**

A power vent is mandatory on this indoor/outdoor fireplace. This fireplace can be power vented either horizontally or vertically.

- **For Horizontal** power venting where venting lengths between 3 feet to 110 feet are required, the power vent unit TCVT.PV7.110 must be used. The internal fan speed in this power vent unit must be switched to the **HIGH** setting.

- **Where Vertical** power venting is required, the power venting unit TCVT.PVCV must be used. Total venting length can be up to 110 feet but is restricted to a 66 foot maximum vertical rise. There is no internal fan speed switch to be concerned with.

---

Figure 25: Horizontal mount power vent.

Figure 26: Vertical power vent.
The gas control system is located on the right hand side of the firebox behind an access panel and the decorative firebox panel (if installed). The fireplace is operated via a wall control and a hand held remote control unit.

**Installation**

1. Place the fireplace in the desired location.
2. Remove the glass door from the fireplace.
3. Remove access panel from bottom left hand side of the firebox (Figure 27).
4. Ensure that the switch on the IFC board is set to PV (Power Vent) (Figure 29).
5. Connect 110 V. AC electrical supply to the wires installed inside the junction box (Figure 27). The fireplace is rated at 110 volts, 60Hz, 0.25A. The optional power vent kit is rated at 115 volts, 60Hz, 1.8A. The electrical wires can be accessed from both inside and outside the junction box by removing one of the two small access panels (Figure 28 and Figure 29).
6. Attach the wall switch to the framing in the desired location. (40 ft is supplied with fireplace).
7. Route the wall switch control cable as required to the wall switch (Figure 31).
8. Attach one end of the wall switch control cable to the interface board (Figure 29), and the other end to the wall control (Figure 31).
9. Do not install batteries into the wall switch (Figure 32). Battery holder must remain empty.
10. If not already installed, install the burner using the instructions supplied with the burner kit.
11. Turn on the gas supply and check that all connections are tight and leak free.
12. Turn on gas and electrical supplies.
13. Move the center button on the wall control (Figure 30) to the “ON” position. The igniter will start to spark. After a short delay, the pilot will light followed by the main burner.
Wall Switch and Remote Control

Note: The wall switch for the TCWS54STOK must not have batteries installed in it. The batteries are for back up in case of a power outage. This fireplace must not operate with a battery back up.

![Wall switch - interface side.](image1)

To Fireplace Wall Switch and Remote Control

Selecting Natural Vent and Power Vent Modes

The TCWS54STOK_D must be pre-set to the “PV” setting.

1. Begin by moving the selector toggle on the wall switch to the “REMOTE” position.

2. Insert a straightened paper clip into the “PROGRAM” slot on the wall switch.

3. Press the internal “PROGRAM” button once and wait until you hear 3 beeps from the wall switch.

4. Press the ON/OFF button of the remote unit. Once the wall unit beeps 3 times, the remote is programmed.

5. The toggle on the wall switch must be kept in the “REMOTE” position in order to use the remote control unit.

![Wall switch no batteries.](image2)

![DO NOT install batteries in the wall switch.](image3)

The NV/PV (Natural Vent / Power Vent) switch (Figure 33) on the interface board (Figure 29) is set according to which type of evacuating vent system is present. In all cases with the TCWS54STOK fireplace, the NV/PV switch MUST be set to PV.

![Vent mode selection switch.](image4)
Home Automation

The home automation feature supplied with this fireplace is capable of controlling the flame and light on/off function with the use of a dry contact relay common to home automation systems. Furthermore, the flame and light level may be modulated from high to low using the 0 - 10 volt analog output available on most home automation systems.

Figure 35 shows the wire designations required to connect the fireplace to a home automation system.

Home automation cable length

The cable from the home automation system to the wall switch should be a length of no more than 200 feet.

NOTE:

- Digital I/O must be connected to a dry contact relay.
- Analog flame and light input through 0 - 10 volt DC signal scaled as follows:
  
  Low = 1 volt  
  High = 10 volts

Figure 34: Complete communication wiring.

Figure 35: Home automation wiring.

NOTE:

When a signal has been supplied by the home automation system, the fireplace control will repeat the signal every 2 hours or until a new command has been received.

Leave the wall switch on the “Remote” setting when using home automation.
Gas Supply

Servicing of the appliance can be performed from inside the unit and through the access panel located in the firebox bottom.

Caution: The gas line should be installed by a qualified service person in accordance with all building codes. This section is intended as a guide for qualified technicians installing this appliance. Consult local and/or national building codes before proceeding.

- Gas supply line access holes are located beneath the fireplace on the flue side of the Control Box. Gas valve inlet accepts a 3/8" N.P.T. fitting. Correct gas line diameter must be used to assure proper operation and pressure.
- A drip leg must be installed in the gas supply line going to the gas control valve to minimize the possibility of any loose scale or dirt within the gas supply line from entering the control valve.
- It is essential that a union or flanged connection be installed just upstream of the valve and inside the control compartment to allow for repair or replacement of the gas valve. Check local codes for additional requirements.

Check local codes for additional requirements.

1. Connect the gas supply to the gas connector (Figure 29)
2. Turn on the gas supply and check that all connections are tight and leak free.

WARNING: The access panel including gasket must be reinstalled after conversion/installation or servicing has been completed. Failure to do so will cause overheating and premature failure of the control system.

Note: To test the gas pressure, turn off the gas supply before removing the plug from the supply pressure test port or manifold pressure test port.

Verify gas pressures with the fireplace lit and on the highest setting.

Please see “Gas Pressure Check” on page 43.
For Power Venting this fireplace, “Power Venting Options” on page 17 and “Venting Configurations” on page 23.

**VENT SUPPORTS:** A minimum of 1 support every 4’ must be used.

**CAUTION:** UNDER NO CONDITION SHOULD COMBUSTIBLE MATERIAL BE CLOSER THAN 1 ½ INCHES FROM ANY PART OF THE VENTING PIPE.

This installation must conform with local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or the Natural Gas and Propane Installation Code, CSA B149.1.

All electrical installations should be performed by a qualified electrician to the Canadian and U.S. National Electrical Codes (CSA C22.1 for Canada), (ANSI/NFPA 70 for the U.S.) and/or local electrical codes.

**Under no circumstances shall a rheostat be used to alter the voltage supply to this unit.**

**MINIMUM VENTING CLEARANCES TO COMBUSTIBLE MATERIALS**

- Terminal casing: 0 in. (0 mm)
- Vertical vent pipe: 1.5 in. (38 mm)
- Horizontal vent pipe: 1.5 in. (38 mm)

All other clearances are as per the fireplace installation instructions.
VENTING CONFIGURATIONS

The power vent is mandatory on this indoor/outdoor fireplace and must conform to the following venting variables:

- Venting can consist of any combination of rise and run up to a total of 110’ including up to 3 ft below the unit and a 66’ vertical rise.
- Six 90-degree elbows or combination of other elbows equaling 90-degrees may be used.
- 2’ per each 90 degree turn used must be deducted from the total allowable venting length of 110’.
- Minimum total vent length is 3 ft plus one 90-degree elbow.
- Ensure vent pipe is properly supported.

Figure 36: Venting configurations.
Minimum Vent Length Chart

Figure 37: Minimum pipe length.

Vent Terminal Minimum Clearances

Figure 38: Vent terminal minimum clearances.

| A= 12 inches (30 cm) min. | Clearances above grade, veranda, porch, deck, or balcony |
| B= 12 inches (30 cm) min. | Clearance to window or door that may be opened |
| C= 12 inches (30 cm) min. | Clearance to permanently closed window recommended to prevent condensation on window |
| D= 24 inches (60 cm) min. | Vertical clearance to ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from the edge of the terminal |
| E= 0 inches (0 cm) min. | Clearance to unventilated soffit |
| F= 6 inches (15 cm) min. | Clearance to outside corner |
| G= 3 inches (7.5 cm) min. | Clearance to inside corner |
| H= 3 feet (90 cm) min. | *Not to be installed above a meter/regulator assembly within 3 feet (90 cm) horizontally from the center-line of the regulator |
| I= 6 feet (1.8m) min. | Clearance to service regulator vent outlet |
| J= 12 inches (30 cm) min. | Clearance to non mechanical air supply inlet to building or the combustion air inlet to any other appliance |
| K= 6 feet (1.8 m) min. | Clearance to a mechanical air supply inlet |
| L= 7 feet (2.1 m) min. | ^ Clearance above paved side-walk or a paved driveway located on public property |
| M= 0 inches (0 cm) min. | Clearance under veranda, porch, deck, or balcony |

* a vent shall not terminate directly above a side-walk or paved driveway which is located between two single family dwellings and serves both dwellings
** only permitted if veranda, porch, deck, or balcony is fully open on a minimum of 2 sides beneath the floor
* as specified in CGA B149 Installation Codes, Note: local Codes or Regulation may require different clearances
* for U.S.A. Installations follow the current National Fuel Gas Code, ANSI Z223.1

</table>
All outer joints of the vent pipe must be sealed with the approved "High Temperature" self-adhesive aluminium tape provided. Wrap the tape completely around the joint and press firmly in place.

Inner pipe does not need to be sealed.
Optional Tranquility Burner

Contents of Package:

Figure 40: Tranquility kit components.

Figure 41: NGST04 Media contents.

- A 2 3.4 lbs sand
- B 1 Hardware pack
- C 1 Pilot rock
- D 2 Burner assemblies
- E 1 Burner tray assembly
- F 5 Pebble sets
- G 2 Secondary floor halves without lights
- H 3 Tray legs
Installation:

If converting to propane see conversion instructions on “Propane Conversion” on page 33 before proceeding.

1. Install one side of the secondary floor as shown. Repeat with the other side but do not put in the two center screws until you put the center tray leg in place (Figure 42 and Figure 43).

2. Attach tray legs as shown in Figure 43. The center tray leg and the right side of the secondary floor are attached with the same screws to the center floor leg.

3. Attach pilot to center tray leg (Figure 44)
4. Install burners as shown in Figure 45. Be sure to engage the venturis onto the orifices in the manifold and rest burners together on the center tray leg.

**TIP:** A light will aid aligning the holes in the tray with the leg.

**CAUTION:** The burners should be tightly butted up against each other at the center to ensure correct operation.

5. Remove the panel retainer clips from inside the firebox and install the side panels. Replace the panel retainer clips (Figure 46 and Figure 47).

**NOTE:** PROCEED TO AND FOLLOW INSTRUCTIONS IN “Gas Pressure Check” on page 43 BEFORE INSTALLING BURNER TRAY AND MEDIA.
6. Install burner tray as shown in Figure 48 using 8 screws. Secure tray around pilot first then the other 6 screws.

Figure 48: ng04 Securing pilot.

7. Place sand into the burner tray and brush smooth. Use caution not to get sand near the burner ports (Figure 49).

Figure 49: Smoothing sand with brush.
8. Each rock has a slot in it’s base and is marked with a letter and an arrow (Figure 50). The rocks must be positioned so that the arrows face the same way.

9. From the outdoor side of the fireplace, place each rock as per the following photographs, start from the right hand side of the burner and ensure that the arrow on each rock points towards the same side of the fireplace. Figure 52 to Figure 60.
10. Repeat the sequence of placing the rocks three more times until the burner is covered.

11. Place the fifth set of rocks randomly around the burners in the sand as desired.

12. Place the pilot rock over the pilot with the opening facing the center of the burner.

13. Install porcelain cover strips that are supplied with the panel set (narrow edge should face the center of the fireplace (Figure 63 and Figure 64).
Propane Conversion

If the unit is to be used on propane convert as follows using the components supplied with the burner:

**CAUTION**
The gas supply and electrical power shall be shut off before proceeding with the conversion.

Note: Factory supplied components must be used to ensure correct input. After conversion confirm proper manifold pressure.

1. If installed remove the sand and rocks from the burners.

2. If installed remove the burner tray. (8 screws) (Figure 66).

3. Remove burners by gently lifting up the end and disengaging from the orifice.

4. Remove access panel beneath the burners in order to remove the gas valve motor head stepper motor. (See SIT conversion kit instruction book for complete conversion instructions).

5. Using a 1/2" wrench, undo the natural gas burner orifice, (marked #32).

   Apply a small amount of pipe joint compound to the threads of the propane burner orifice (marked #51) to ensure a good seal, before screwing it into the manifold.

   Loosen the primary air shutter screw, open shutter to give a gap of 13/64" (0.2") and re-tighten. Repeat on other burner (Figure 68).

6. With a 7/16" wrench loosen the pilot head on the pilot assembly. (Figure 69)

**WARNING**

This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction.

If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life.

The qualified service agency is responsible for the proper installation of this kit.

The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.
7. Slide the pilot adjustment band over and ensure that the hole in the orifice band is showing.

   Figure 70 shows NG position

   Figure 71 shows LP position.

8. Fill in the date and the name of the person who performed the conversion in the white area on the conversion label (sample below). Peel off the protective backing and apply the conversion label directly over the gas specifications on the rating label.

9. Re-attach the access panel to the floor of the firebox with the screws previously removed then replace the secondary floor and install or reinstall the burners, burner tray and media.

   WARNING: Both the control box shield and the access panel must be reinstalled after conversion/ installation or servicing has been completed. Failure to do so will overheat and cause premature failure of the control system.

For complete valve conversion installation instructions, refer to the instruction book included in the SIT conversion kit.

Update the LP conversion sticker after conversion is finished.
Optional Twilight Diamond Burner

Contents of Package:

1. Hardware pack
2. Burner assemblies
   - 1 Burner tray assembly
   - 2 Secondary floor halves with lights
Installation:

If converting to propane see “Propane Conversion” on page 33 before proceeding.

1. Install the secondary floor on the side away from the gas connections first.

2. Insert the wires leading from the secondary floor half through one of the grommets in the bulkhead plate.

3. On the bulkhead side, tilt the floor approximately 45 degrees and insert the wires from the floor through the rubber grommet in the bulkhead plate (Figure 72).

4. Insert the pilot up through the pilot hole then lower and secure the secondary floor half in place.

5. Place the first burner as shown in Figure 73. Be sure to engage the venturi fully onto the orifice. Secure with single screw in burner support leg. Repeat with other burner.

6. Attach the pilot to the burner support leg as shown in Figure 74.

NOTE: Check air shutter for correct fuel setting before proceeding further. Both burner shutters are to be set the same, fully closed for natural gas. 13/64 (0.2)” open for LP.

CAUTION: The burners should be tightly butted up against each other at the center to ensure correct operation.
7. Remove the panel retainer clips from both sides of the upper firebox (Figure 75)

8. Insert both side panels (Figure 76)

9. Place mesh burner tray on top of burners and secure the tray ends to the panels first. Two screws per side. (Figure 77)

10. Secure the mesh to the burners with screws provided by screwing through mesh to each small flange on the burners, 8 per burner (Figure 77)

NOTE: PROCEED TO AND FOLLOW INSTRUCTIONS IN “Gas Pressure Check” on page 43 BEFORE INSTALLING BURNER TRAY AND MEDIA.
11. Place the two porcelain strips, supplied with the panel set, into the fireplace as shown in Figure 78 with the narrow edge facing the center of the fireplace.

12. Spread the glass media evenly over the entire mesh tray, leaving the small protrusion above the pilot clear of glass.

Figure 78: Positioning the porcelain strips.

NARROW EDGE TO CENTER OF FIREPLACE.
Finishing Touch Trim Kit Installation

The trim kit includes two side pieces, a top piece, and a bottom meshed piece which will be placed onto the fireplace floor and in front of the glass once the fireplace door is installed.

Installation (Indoor side only)

1. With the door in place, begin by setting out the two side trim pieces and the top piece. Each of these three trim pieces require 2 small button magnets which are included with the trim pieces.

2. Install the two side trim pieces first using two smaller magnets on each piece as shown in Figure 79 and Figure 80.

3. Install the top trim piece over top of the two side trim pieces using two larger magnets (Figure 81 and Figure 82).
4. The meshed trim piece for the bottom rests on the floor and in the gap between the outer-most door frame and the fireplace glass (Figure 83 and Figure 84).

5. The trim kit comes with a Town & Country badge (Figure 85). Affix this badge to the right hand side of the lower meshed trim piece as shown in Figure 86.

6. Attach the magnetic safety barrier screen (Figure 87) to the outer-most door frame.
Wiring instructions for the TC54ST Twilight Burner kit

To connect the lighting wires for the Twilight burner plate, do the following:

• With the control compartment to your left, place the right-hand secondary floor plate in place and route the two wires from the lights to the left side of the firebox (Figure 88). Feed the two wires down through the left most grommet in the gas control compartment cover (Figure 89).

• From inside the control compartment, continue to route the wires through one of the electrical knockouts located in the electrical connection compartment cover (Figure 90).

• For the right hand secondary floor lighting, route the wires through the same grommet and into the electrical connection box (Figure 91).

• Connect the wires to a switched 120 VAC, 60Hz, 3A power supply, one pair made up of one wire from the left and one wire from the right light set to the “HOT” incoming line. The remaining pair to the “Neutral” incoming line (Figure 92).

Figure 88: Right hand plate in place with its wires brought out from under it.

Figure 89: Wires through grommet.

Figure 90: Threading wires through knockout.

Figure 91: Bringing wires through front plate.
Figure 92: TCWS54ST lights wiring diagram.
Note: To test the gas pressure, turn off the gas supply before removing the plug from the supply pressure test port or manifold pressure test port.

Verify gas pressures with the fireplace lit and on the highest setting.

1. If installed, remove all media and the burner tray.

2. Remove the plug from the pressure test port using a 3/16" hex key. The pressure test ports are located next to the center tray leg opposite from the pilot (Figure 93).

3. Thread the extension test fitting into the open port (Figure 94).

4. Attach a pressure gauge onto the fitting and rest the gauge on secondary floor where it will be visible with the doors closed and unit running.

5. When testing is complete shut off the gas, remove the fitting and replace the plug. Thread sealant will be required to ensure a gas tight connection.

Correct gas pressure requirement:

</table>
The air shutter on the burner tube controls the primary combustion air. It is set to the closed position at the factory for natural gas fuel. If using liquid propane, see “Propane Conversion” on page 33. Some adjustment may be necessary to obtain desired flame and to eliminate carbon deposits. Evaluate flame appearance after the fireplace has reached operating temperature. See Figure 95 for proper flame pattern.

Open primary air if the door glass and firebox have carbon accumulation and/or the flames are long, dark and stringy. The shutter may also be opened to lessen the flame height.

NOTE:
Proper air shutter setting is required.

The flame should be just orange and “lazy”. It should NEVER be set to create sooting on internal parts and door glass.

Figure 95: Example of desirable flame pattern.
1. Remove side panel securing tabs for both sides in upper firebox (Figure 96).

2. Place bottom of side panel in first then tip up into vertical position (Figure 97).

3. Attach the side panel securing tabs previously removed. Repeat steps 2 & 3 with other side panel.

4. Place porcelain strips as shown in Figure 99.

**NOTE: Install burner now.**

**NOTE:** The Porcelain strips, that came with your panel set, have a short flange on one long edge. This short flange should face in towards the burners and media.
FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.
B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.
WHAT TO DO IF YOU SMELL GAS:
- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.
- Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.
D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance & to replace any part of the control system & any gas control which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information above on this label.
2. This appliance is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.
3. Push the "On/Off" switch to turn the fireplace ON.
   - If the burner does light go to step 6.
   - If the burner does not light, complete steps 4 through 5.
   - If the burner will not light or stay lit after several tries, push the "On/Off" switch for the fireplace to OFF, turn off all electric power to the fireplace and call your service technician or gas supplier.
   Note: Sufficient time must be allowed for air to escape from lines if the unit is being lit for the first time.
4. Push the "On/Off" switch to the fireplace Off.
5. Allow sufficient length of time (minimum 5 minutes) for any gas in the combustion chamber to escape. If you still smell gas, STOP! Follow "B" in the safety information above on this label. If you don't smell gas, go to step 3.
6. Set fireplace to desired setting by using hand held remote.

TO TURN OFF GAS APPLIANCE

1. Push the "on/off" switch to the "Off" position.
2. Turn off all electric power to the appliance and remove backup batteries if service is to be performed or for extended shutdown.

Due to high surface temperatures, keep children, clothing and furniture away. Keep burner and control compartment clean. See installation and operating instructions accompanying the appliance.

CAUTION: Hot while in operation. Do not touch. Severe burns may result. Keep children, clothing, furniture, gasoline and other liquids having flammable vapours away. Keep burner and control compartment clean. See installation and operating instructions accompanying the appliance.

ATTENTION: L'appareil est chaud lorsqu'il fonctionne. Ne pas toucher l'appareil. Risque de brûlures graves. Servir les enfants. Garder les vêtements, le meubles, l'essence ou autres liquides produisant des vapeurs inflammbles loin de l'appareil. S'assurer que le brûleur et le compartiment des commandes sont propres. Voir les instructions d'installation et d'utilisation qui accompagnent l'appareil.
Maintenance

CAUTION:
Turn off gas and electrical power supply (if applicable) and allow ample time for unit to cool before servicing appliance. It is recommended that the fireplace and its venting should be inspected at least once a year by a qualified service person.

Glass Panel:

Warning: Do not operate fireplace with glass panel removed, cracked or broken. Replacement of the glass panel should be done by a licensed or qualified service person.

Do not strike or otherwise impact the glass in anyway that may cause it to break. If the glass becomes cracked or broken it must be replaced before using the fireplace. Replacement glass can be obtained from your nearest Town & Country Fireplaces dealer. The size required is 52" x 42" x 5mm. Use ceramic glass only. Do not substitute with any other type.

To remove broken glass, remove door frame as noted in "Door Frame Removal" section.

Unclip the Glass Retainer Clips located at the top and sides of the Window Frame. Pull the top edge of the glass out of the frame first, then lift it up and out of the bottom edge.

Install the new piece of glass with the gasket into the frame so that the thicker bead of gasket faces the fireplace.

Re-install glass retaining clips.

Annual Inspection:

a) Remove glass panel and inspect the decorative burner media (such as logs, pebbles, glass etc) for soot build up. If excessive build up of soot is present, have a qualified service person inspect and adjust the unit for proper combustion. Clean the decorative media and use a brush or vacuum cleaner to clean the burner, paying close attention to the burner ports.

b) Check the pilot system for proper flame size and operation. Clean pilot free of soot, dust or any other deposits.

c) Check that the vent pipe and vent terminal are open and free from blockage or debris. If the venting is disassembled for cleaning, it must be properly assembled and re-sealed. Refer to VENTING section for proper procedure.

d) Check glass panel gasket, replace if necessary. It is important that the glass seal be maintained in good condition.

e) Check and replace batteries as needed.

Note: The appliance area must be kept clear and free from combustible materials, gasoline and other flammable vapours and liquids.

Periodically:

a) Viewing glass may be cleaned as necessary with fireplace glass cleaner.

b) Exterior finish may be cleaned with mild soap and water.

CAUTION:
Do not use abrasive cleaners on glass or any other part of the fireplace.

Do not clean glass when hot.

**KIT CONTENTS:**

#1 CONTROL ASSEMBLY KIT
1a VALVE c/w FITTINGS
1b 1/4" FLEX TUBE
1c 1/2" FLEX TUBE
1d CONTROL MOUNTING BRACKET
1e IGNITION MODULE
1f WIRING HARNESS
1g TRANSFORMER
1h PRESSURE TEST ASSEMBLY
1i REGULATOR BOARD
1j PRESSURE SWITCH

#2 BULKHEAD ASSEMBLY KIT
2a INLET PLATE
2b INLET PLATE GASKET
2c ELEC BULKHEAD GASKET
2d 1/2" BULKHEAD FITTING
2e 1/4" BULKHEAD FITTING
2f ELEC BULKHEAD FITTING

#3 COMMUNICATION CABLE KIT

#4 TEST FITTING

#5 WALL SWITCH ASSEMBLY KIT (not shown)

#6 REMOTE TRANSMITTER (not shown)
### Required Components/Éléments requis:

- Powervent Kit/kit de ventilation mécanique TCVT.PV7.110 (on max.), TCVT.PVCV, TCVT.PVVT (on max.)

**Blower Electrical Rating:**

- 115v, 60hz, 1.1 A

**This appliance equipped for altitudes 0 - 4500 ft. (0 - 1372 m):**

- In Canada, also must be installed in accordance with local codes, if any; if none, follow the current CAN/CGA-B149 (Canada), or ANSI Z223.1 (USA) installation codes. Installer l'appareil selon les codes ou règlements locaux, ou, en l'absence de tels règlements, selon les codes d'installation CAN/CGA-B149 (Canada), or ANSI Z223.1 (USA) en vigueur.

**MANUFACTURED (MOBILE) HOME:**

- This appliance is only for use with the type of gas indicated on the rating plate and may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes. See owners manual for details.

**FOR USE WITH/POUR UTILISATION UNIQUEMENT AVEC:**

- Natural Gas/ Gaz naturel
- LP Gas/ Gaz LP

### Minimum Clearances to Combustibles/CLAIRANCES MINIMALES AVEC LES COMBUSTIBLES

**Left and Right side are determined when facing the front of the appliance./Les côtés droit et gauche se déterminent en se mettant devant l'appareil et en lui faisant face.**

- Top, Back and Side Standoffs / Sommet, Arrière et Côté Butée
- Sidewall to Appliance / Du mur latéral a l'appareil
- Ceiling to Appliance / Plafond a l'appareil
- Mantel to Appliance / Du manteau a l'appareil
- Maximum Mantel Extension / Allongement maximum du manteau
- Mantel Supports / Supports du manteau
- Vent Pipe / Déchargez le Tuyau

**Minimum supply pressure / Pressure minimum d'alimentation:**

- For the purpose of input adjustment / dans le but de régler l'alimentation

**Maximum supply pressure / Pression maximum d'alimentation:**

**Manifold pressure / Pression de la tuyauterie:**

**Orifice Size / Diamètre de l'injecteur:**

**Input BTU/hr (kW):**
